

Dental Clinical Policy

Subject: Bone Grafts for Dental and Oral Surgical Services

Guideline #: 07-901

Status: Revised

Publish Date: 01/01/2023

Last Review Date: 11/11/2022

Description

This document addresses the clinical appropriateness for bone grafting and the type of grafting materials used with dental and oral surgical procedures and addresses the use of bone graft substitutes for all dental indications and procedures.

The plan performs review of bone grafts for dental and oral surgical services due to contractual requirements that necessitate benefits for dental services meet specific contract requirements. For example, plan contract(s) may require the provision of benefits for services that meet generally accepted standards of dental care at the lowest cost that properly addresses the patient's condition. The conclusion that a particular service is medically or dentally necessary and/or appropriate does not constitute an indication and/or warranty that the service requested is a covered benefit payable by the dental plan.

Clinical Indications

Bone grafts may be appropriate when replacing missing bone of the maxilla or mandible as a result of congenital anomalies, infection, or trauma.

Dental review as it applies to accepted standards of care means dental services that a dentist, exercising prudent clinical judgment, provides to a patient for the purpose of evaluating, diagnosing or treating a dental injury or disease or its symptoms, and that are: in accordance with the generally accepted standards of dental practice; in terms of type, frequency and extent and is considered effective for the patient's dental injury or disease; and is not primarily performed for the convenience of the patient or dentist, is not cosmetic and is not more costly than an alternative service.

For dental purposes, "generally accepted standards of dental practice" means:

- Standards that are based on credible scientific evidence published in peer-reviewed, dental literature generally recognized by the practicing dental community
- specialty society recommendations/criteria
- the views of recognized dentists practicing in the relevant clinical area
- any other relevant factors from credible sources

Criteria

Requests for bone grafting procedures may be reviewed for appropriateness by dental professionals. Submitting dentists must include any and all clinical information related to the procedural request including, but not limited to, recent, dated radiographic images, a letter of rationale explaining the necessity of the bone graft and whether related to another service, a recent patient health history, and a recent dated periodontal chart, if applicable.

Patients with medical complications or contraindications, demonstration of poor oral hygiene, or habits that compromise the healing process, such as smoking cigarettes or cigars, must be considered for bone graft procedures.

When the primary procedure is not a covered service, all related adjunctive procedures, including but not limited to, bone grafts and use of membranes even though covered by the plan for other services is not a covered benefit as it is related to a non-covered service.

1. Bone graft procedures associated with endodontic therapies or with minor periradicular surgery may not be benefitted as typically bone heals by secondary intention.
2. Current (within 12 months), dated, diagnostic, pretreatment radiographic images.
3. Bone graft procedures include post-operative management for the immediate three months following surgery as well as for any surgical re-entry for three years (group contract dependent).
4. Omitted
5. For major bone graft (reconstructive) procedures, the patient's medical plan should be checked for coverage.
6. Routinely placing bone grafts into extraction sites may not be necessary for complete and adequate healing.
7. Narrative and chart notes may be required.

Coding

CDT	<i>Including, but not limited to, the following:</i>
D6100	Implant removal, by report
D6103	Bone graft for repair of peri-implant defect
D6104	Bone graft at time of implant placement
D7295	Harvest of bone for use in autogenous grafting procedure
D7950	osseous, osteoperiosteal, or cartilage graft of the mandible or maxilla – autogenous or non-autogenous, by report
D7951	Sinus augmentation via a lateral open approach
D7952	Sinus augmentation via a vertical approach
D7953	Bone replacement graft for ridge preservation
D7955	Repair of maxillofacial soft and/or hard tissue defect

ICD-10 CM Diagnoses for Dental Diseases and Conditions: See the current CDT code book for details
